

**INCIDENT FACTS**

**REPORT #:**  
71-205-2021

**REPORT DATE:**  
March 9, 2021

**INCIDENT DATE:**  
May 14, 2018

**VICTIM:**  
59 years old

**INDUSTRY:**  
Nursery, Garden, and Farm Supply Stores

**OCCUPATION:**  
Delivery driver

**SCENE:**  
City street adjacent to customer deliver site

**EVENT TYPE:**  
Forklift/Tip over/Struck by

The three-wheel drive forklift shown as it is being winched by a cable onto a tow truck's flatbed.

This narrative is an alert about the fatality of a worker and is based on preliminary data ONLY and does not represent final determinations regarding the nature of the incident or the cause of the death. Developed by WA State Fatality Assessment and Control Evaluation (FACE) Program and the Division of Occupational Safety and Health (DOSH), WA State Dept. of Labor & Industries. The FACE Program is supported in part by a grant from the National Institute for Occupational Safety and Health (NIOSH grant# 5U60OH008487). # Delivery Driver Dies when Forklift Overturns While Delivering Landscape Paving Blocks

**SUMMARY**

A delivery driver died when the truck-mounted forklift he was operating overturned on a city street as he was delivering landscape paving blocks to a residence.

His employer was a landscape gardening materials supplier. He had worked for the company for 18 months. He had a commercial driver's license; previously, he had worked as a delivery driver for other companies.

On the day of the incident, he was making a delivery of eight pallets of manufactured stone landscape paving blocks to a newly constructed residence. He parked his flatbed truck curbside facing downhill on the 20-degree slope of a city street. He used the three-wheel drive, truck-mounted forklift to delivery six pallets. As he prepared to lift a seventh pallet from the flatbed, he positioned the forklift in the street to the side of the flatbed. The forklift's left front wheel was in a 1 3/4-inch depression in the road. As he was lifting the pallet, the weight of the load and the position of the wheel, caused the forklift to overturn. The driver, who was not using the seatbelt, was pinned under the forklift's overhead guard. He died at the scene.

**REQUIREMENTS**

- Employers must make sure operators use restraint devices, such as seatbelts or lap-bars when they are provided on the powered industrial truck. See [WAC 296-863-40005\(1\)](#)
- Employers must conduct walk-around safety inspections. See [WAC 296-155-110\(9\)](#)

**RECOMMENDATIONS**

FACE investigators concluded that, to help prevent similar incidents:

- Employers should train employees to avoid driving truck-mounted forklifts on steep slopes. If forklift operators must drive on a slope:
  - Avoid sudden movements when the load is raised, as this may cause the forklift to tip over.
  - Keep load as low as possible and close to the mast.
  - Use the lowest transmission gear.
  - Reduce travel speed.
  - Drive up or down the slope, not across it.
  - Travel with heavy end of the forklift upslope. (The forklift did not have a large counterweight, so when this type of forklift is moving a load, operators should point the forks upslope.)
- Employers should also:
  - Consider equipping forklifts with a safety interlock system that requires that the operator be in the seat with the seatbelt fastened in order to operate the forklift.
  - Conduct unplanned site visits as part of their safety program to ensure employees are following proper safety practices.
  - Train forklift operators to follow the requirements of the manufacturer's operator's manual.
- When making deliveries, ensure that there is a safe place to both park the delivery vehicle and operate the forklift. Drivers should communicate with their supervisor if there are problems.

Scene where delivery driver was pinned under the forklift's overhead guard when it overturned on a 20-degree slope.
